Product information:

Roll width: 1250 mm

Roll length: ≥ 300 m

Flexible and adaptable

Adhesive décor surfaces

A hot melt is added to the back side of the classic Elesgo *clean touch* surface. This makes the coating of the wooden composite boards (HDF or MDF) with standard veneer, mould, or on a roll laminating press possible. This enables you to produce infinite board format with minimal surface waste.

This way Elesgo *clean touch melt* easily optimises your product with the well-known Elesgo *clean touch* characteristics, the soft touch, anti-fingerprint, mechanical endurance and much more. Additionally, small errors are fully concealed by the Elesgo *clean touch melt* surface with nearly no reflection.
